

How landscapers can use Sylentmite

Sylentmite is a non-explosive demolition agent and is suitable for use in all landscaping projects whether it's parks, recreation facilities, commercial or residential developments, gardens, irrigation systems, concreting or stone work.

Sylentmite can be used alone or in conjunction with traditional demolition methods to help cut costs, work time and increase safety.

Benefits of non-explosive demolition in the Landscaping industry

Sylentmite is Cost effective

- Low cost
- Saves time on large jobs
- No heavy equipment hire
- No permits or license fees
- No additional labour charges

Sylentmite is Safe

- No blasting or explosives
- No ground vibration risk
- No danger from flying debris
- No dust or noise management
- No dangerous heavy machinery

Sylentmite is Eco-friendly

- No ecological contamination to flora or fauna
- No dust or air pollution
- No toxic chemicals used
- No noise or environmental pollution

Sylentmite is Easy to use

- Perfect for confined spaces
- No special permits or licenses required
- Easy to transport and store
- No special training needed

Professional Landscapers use non toxic, non explosive, expansive mortar Sylentmite as the preferred solution for:

- Cracking and breaking up boulders, rocks and concrete
- Trenching, excavating and clearing for retaining walls and drain works
- Ideal problem solver for removing obstacles in confined spaces
- Sites with noise pollution restrictions (e.g. residential areas, schools, hospitals, airports, etc.)
- Sites with restrictions on causing ground vibration, air blasting and dust pollution
- Sites where surrounding buildings or other structures would be damaged by flying debris
- Controlled, partial or selective demolition jobs
